1. All pending claims 1-15 are allowed. Claims 1, 8 and 14 and are independent.

2. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 8 and 14 are allowable over the prior art of record. Claims 1, 8 and 14 each require that a first reference level generation mechanism be provided at a predetermined position on the moving mechanism which moves the mirror set, along the object to be read, and allows the CCD sensor to generate a first reference level output without reference to optical intensity of the illumination light emitted from the light source which illuminates the object, in combination with the second reference level generation mechanism which generates reflected light when illuminated by the light source. These limitations in combination with other limitations of claims 1, 8 or 14 are not taught by the prior art of record.

Claims 2-7 depend upon claim 1. Claims 9-13 depend on claim 8. Claim 15 depends upon claim 14.

The closest prior art reference Sakakibara et al. (U.S. Patent No. 5,206,501), cited below, teaches placing three filters (16), one at a time, between the lens (8) and the CCD (9) to generate intermediate reference signals, the filters having different transmittance and the same spectral characteristic (col. 5, lines 3-27). However, Sakakibara et al. does not teach the features of the first reference level generation mechanism and the second reference level generation mechanism.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sakakibara et al. (U.S. Patent No. 5,206,501), cited below, teaches placing three filters (16), one at a time, between the lens (8) and the CCD (9), the filters having different transmittance and the same spectral characteristic (col. 5, lines 3-27).

Ohtsu (U.S. Patent No. 5,970,181) discloses an image scanning apparatus with a shading correction function.

Hashizume (U.S. Patent No. 6,771,397) discloses an image reader used in an image forming apparatus.

Ozawa (U.S. Patent No. 6,430,378) discloses an image forming apparatus with a lamp burn-out detection (2 and 3 in Fig. 3).

Arimoto et al. (U.S. Patent No. 5,371,613) discloses an image reading apparatus employing first and second standard members having even standard density but placed at different positions.
